Kaltura Media

Adding Kaltura Media as an Embedded Mashup in Content

This document describes how to add recorded Kaltura media into a content item or folder in Blackboard using the Mashup feature in the text editor. Using media within items or folders enhances course content or instructions.

*Note:* If you do not see this tool, please review the Kaltura Availability document.

**Instructions**

Kaltura Media files can be embedded in content builders such as: *Item, Folder, Module Page, Learning Module, or Lesson Plan*. All of these options can be found under the **Build Content** button.

1. Hover over the **Build Content** button to reveal the drop down menu.
2. Choose one of content building items from the drop down list.

3. On the new page, enter the content **Title**.

4. In the text editor box, click the **Mashup** button to reveal a drop down menu.
5. Select **Kaltura Media**.

6. A pop up window will open to the personal media gallery. **Select** the desired video.
8. Once selected, a new page will appear. You can change the metadata as you desire.

9. Once complete, click **Embed**.
11. The video will now appear in the text editor box. You may add additional text to the text editor as needed.

12. Once complete, click **Submit**.

13. The view will be embedded into the content area.
